

AMAN SARAOGI

Software Engineer · Full-Stack (TypeScript / Node / React) · Data & Applied AI
Pune / Kolkata, India · saraogiaman003@gmail.com · +91 87775 75990 · [LinkedIn](#) · [GitHub](#)

SUMMARY

Engineer who builds software against real business problems. Built and deployed a quotation-to-dispatch system for Aglo Polymers Pvt. Ltd., now in daily use by their sales and dispatch team — encoding INCO terms, HSN codes, export tax treatment and a 10% shipment variance clause directly into the domain model. Also built an AI resume-analysis product with schema-constrained LLM calls. Earlier a data analyst intern with the same group. Comfortable sitting with a domain expert, extracting the rules nobody has written down, and turning them into working software.

EXPERIENCE

Software Developer — Aglo Polymers Pvt. Ltd. (Aglo Group)

Jun 2026 – Present

Quotation Manager — order-to-dispatch document system [GitHub ↗](#)

- Invited back by the group after interning with them, to replace a fully manual, spreadsheet-and-retyping documentation process; gathered requirements directly from the client, scoped the system, and delivered it into daily use by a team of 5–6 across sales and dispatch.
- Built a complete order-to-dispatch document system (Quotation → Order → Proforma Invoice → Commercial Invoice + Packing List) in which each document is generated from the previous one, eliminating re-entry and manual arithmetic across the whole chain.
- Modelled real export-trade rules in the domain layer: HSN codes, INCO terms, multi-currency (INR/USD/EUR), GST versus zero-rated export treatment, and automatic validation of dispatch quantities against the contractual 10% variance clause.
- Implemented role-based access control with a manager approval gate — employees see only assigned customers, and unapproved documents export with a "Pending Approval" watermark, making the approval state impossible to bypass.
- Centralised all monetary computation server-side as a single source of truth, and generated four branded PDF document types with per-type yearly numbering.
- Deployed to production on Render, selecting SQLite on a persistent disk over serverless after determining a file-backed database is incompatible with ephemeral filesystems; added WAL-aware daily snapshots with 14-day retention.
- Worked directly with the sales and dispatch staff who use the system — walked them through it, collected feedback from real use, and iterated in response.

Data Analyst Intern — Aglo Packaging Pvt. Ltd. (Aglo Group)

Dec 2025 – Jan 2026

- Worked directly with operations and sales stakeholders to scope reporting needs, then built 4 Power BI dashboards tracking 10+ KPIs, used weekly by senior management for decision-making.
- Automated recurring reports with Python and Excel, cutting reporting turnaround time by ~30%.
- Built repeatable transformation pipelines over 8+ raw data sources, reducing the team's data preparation time by ~40%.

Maths Faculty — Bakliwal Tutorials, Pune

May 2026 – Present

- Tracked and analysed performance data for 30+ students in Excel, identifying learning gaps and improving average test scores by ~15%.
- Delivered structured lessons across 3 batches, adapting explanations in real time to each student's level — the same translation skill needed to explain technical systems to non-technical users.

Graphic & Content Designer — SimpleSample

Jul 2024 – Dec 2024

- Produced 50+ creatives across formats for 3 marketing teams — social media reels, posters, brochures and pamphlets — delivered on deadline with consistent visual standards.
- Designed the company's Amazon product listing interface, structuring product imagery and page layout for the storefront.

PROJECTS

Resume Roaster — Next.js 15, React 19, TypeScript, Tailwind, Anthropic & OpenAI APIs

[GitHub ↗](#)

- Built an AI resume-analysis product scoring 14 categories with supporting evidence quotes, ATS keyword matching against a pasted job posting, prioritised fix lists, and one-click bullet rewrites with STAR breakdowns.
- Constrained every LLM call with hand-written JSON Schemas and re-validated with Zod, so malformed output fails loudly instead of rendering a broken dashboard; scoring stays deterministic in TypeScript rather than trusting model arithmetic.

TECHNICAL SKILLS

Languages: Python, SQL

Visualisation Tools: Power BI, Tableau, Matplotlib, Seaborn

Libraries & Techniques: Pandas, NumPy, EDA, Data Cleaning, Feature Engineering

Other Tools: Advanced Excel, Git

Also Worked With: TypeScript, Node.js / Express, React, SQLite

AI-Assisted Development: Claude Code — specifying, building and iterating on full-stack applications with AI coding tools

Certifications: Data Analytics Advanced — Udemy (Python, SQL, Power BI, Tableau)

EDUCATION

B.Tech, Civil Engineering — National Institute of Technology, Durgapur

2022 – 2026

Leadership: Convenor, Debating Society, NIT Durgapur — led a 25-member team to organise VISTAAR, Eastern India's largest intercollegiate debate fest.
